

# Atlanta Mission's Helping Hands

## Setting Atlanta Mission's Clients up for Success

By: Nabilah Siddiqui, Charles Lyding, Chirag Dara, Daniel Carlson, and Grant Williams

## THE CHALLENGE

---

- Covid Related Workforce limitations and need to manage multiple clients
- Limitations in communicating entirety of offered services
- Engaging experience between the client and case worker

# ABOUT THE PROJECT

---

- A Lightweight Mobile application built on a ReactJS (JavaScript library) with Firebase Backend
- Customized Landing Pages specified for user groups (client/case worker)
- Ability to give/receive feedback through secure chat
- Client Accomplishment and progress tracking
- Centralized course list to view and interact with learning content

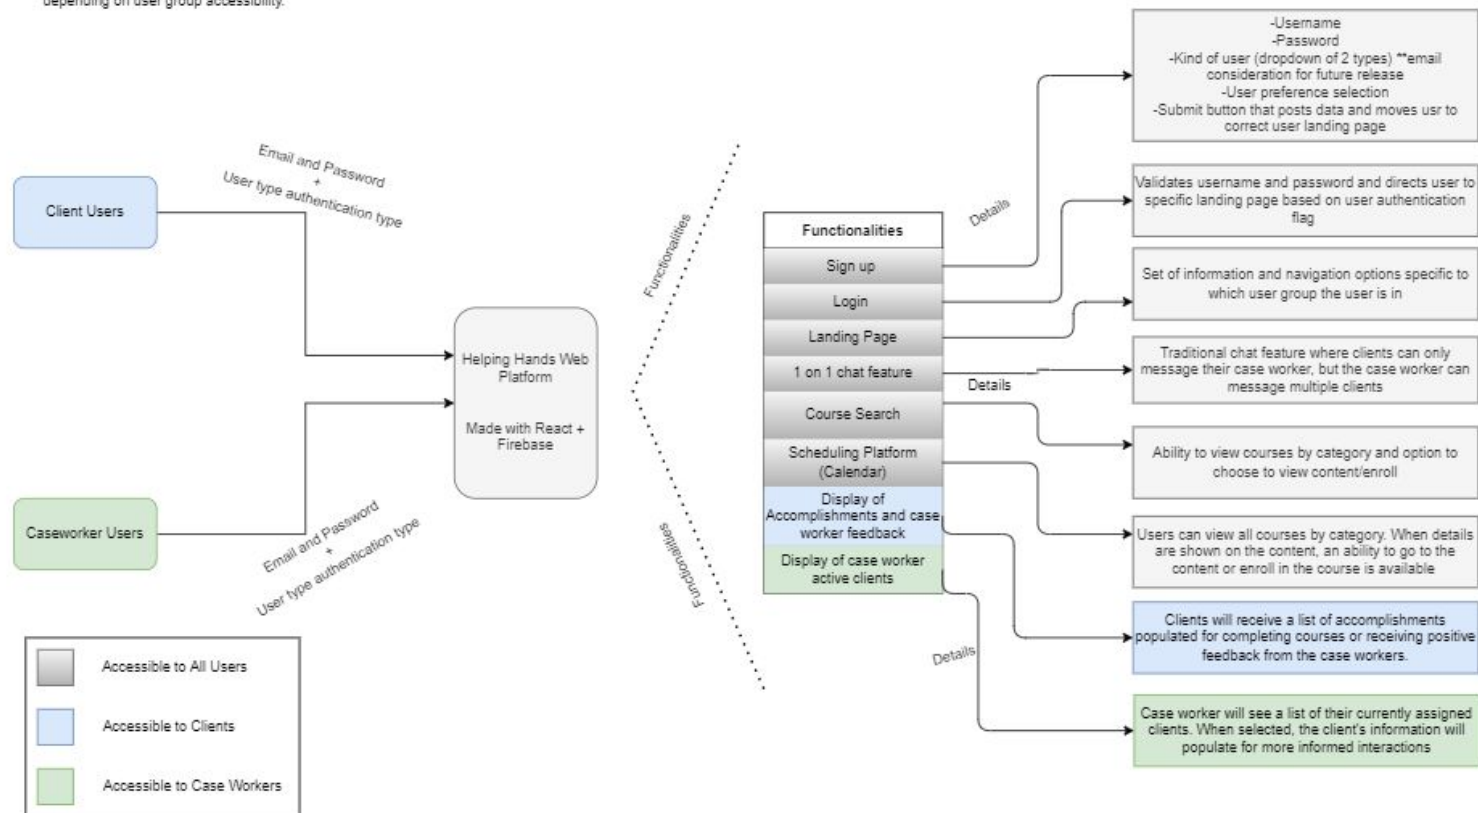

## OUR PROCESS

1. Brainstormed and Built Requirements
2. Built of High Level Diagram
3. Designed UI and Wireframe User Flow
4. Development of Technical Prototype
5. Presentation of Deliverable Items

## Helping Hands High Level Overview

This diagram shows the different user types flowing into the application and what functionalities they can access.

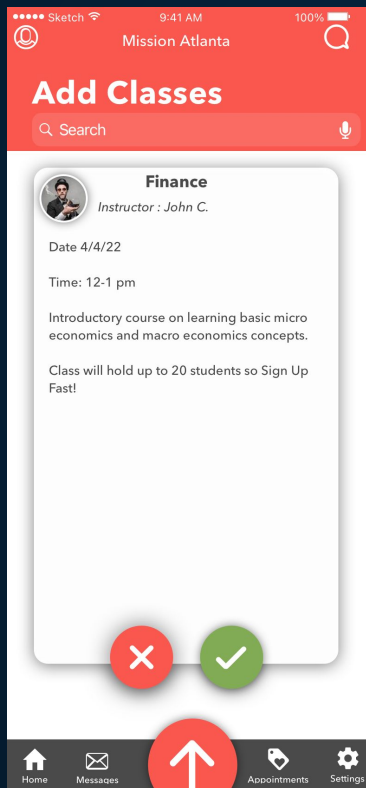

Different app functionalities are listed, and the details described are all color coded depending on user group accessibility.

# INTEGRATION IDEAS

The screenshot shows the 'Get Help' section of the Atlanta Mission website. The header includes a navigation menu with links: 'Get Help', 'Who We Are', 'What We Do', 'Get Involved', and 'Ways to Give'. There are also social media icons for Facebook, Instagram, LinkedIn, Twitter, and YouTube, a search bar, and a 'Give now' button. The main heading is 'Not sure where to go?'. Below it, a subtext says 'Answer the questions below to find which one of our locations would be best for you.' There are two radio button options: 'I'm a male.' and 'I'm a female.'. A yellow 'Next step' button is positioned below the options. To the right of the text is a photograph of three men standing together outdoors. A large blue arrow points from the left towards the 'Next step' button.

- Our team evaluated that the Get help section of the current Atlanta Mission website would be an ideal location to gain application users.
- Contact data in the Salesforce CRM system would also be useful in target marketing.

# THANKS!

Project Deliverables:

- Technical Prototype:
- UI framework :
- Google Drive Assets
- Project Folder (including deployed app)
